SUMMARY

NYC-based software engineer building full-stack data platforms and workflow systems for real-estate finance. Sole engineer translating property, borrower, and CRM data into reliable applications for qualification, underwriting support, pricing, and demand signals.

EXPERIENCE

GTM & Operations Engineer

Apr 2026 – Present

MoFin Lending Corporation

New York, NY

- Sole engineer for a lender originating approximately \$200M annually; partner directly with the co-founder to translate growth and operating priorities into data platforms, software, and automation, owning architecture through delivery.
- Built a proprietary lender-intelligence platform on SFRA and Forecasa borrower data, enriching it with Zillow market data, FRED mortgage-rate series, and internal borrower, CRM, and funded-loan performance history; processed hundreds of thousands of borrowers to identify financing opportunities.
- Designed modular Django services with transactional event logging and vendor adapter boundaries, making data changes auditable and external integrations replaceable; established automated tests, observability, and infrastructure as code.
- Built borrower-fit and financing-demand models from entity resolution, mortgage reconstruction, transaction histories, product rules, and internal historical performance patterns to prioritize outreach and support lending decisions.
- Rebuilt the company's Webflow site in Next.js and React, implementing financial calculators and validated lead capture; established automated content, visual, and interaction checks to preserve business logic and user experience through changes.
- Built proprietary outbound email infrastructure from zero, scaling hundreds of mailboxes with automated provisioning, warmup, and deliverability monitoring; capable of contacting hundreds of thousands of leads monthly.
- Built and maintained multiple internal codebases and server-side processing pipelines across Pipedrive, Clay, Airtable, and Zapier, scraping and normalizing public data with deduplication, state tracking, and resumable workflows for sales execution.
- Integrated CRM, enrichment, and reporting systems into repeatable workflows, giving sales leadership visibility into pipeline performance and exposing discrepancies between open deals and funded-loan records.

Software Engineer

Feb 2025 – Apr 2026

LuxeSwap

Oyster Bay, NY

- Sole engineer for a luxury consignment business generating \$2.5M+ annually; built and owned acquisition, inventory, pricing, and customer-operations software that contributed to \$350K+ in year-over-year revenue growth.
- Cut listing preparation 95%, from 10 minutes to 30 seconds per item, with AI-powered classification and workflow automation, enabling \$250K+ in annual revenue through added inventory-processing capacity; launched luxeswap.com in six weeks, creating a digital acquisition channel generating 50+ qualified B2B inquiries monthly.
- Unified 150K+ records in a Python ETL pipeline; built a JWT-secured CRM for 750+ consignor accounts and a pricing engine from 130K+ historical sales, replacing fragmented spreadsheets with automated reconciliation, reporting, valuations, and an interactive quote builder.

TECHNICAL SKILLS

Application Engineering: Python, Django, Django Ninja, TypeScript, JavaScript, React, Next.js, Node.js, REST APIs

Data & GTM Systems: SQL, PostgreSQL, ETL, entity resolution, mortgage reconstruction, web scraping, Pipedrive, Airtable, Clay, Zapier

AI & Connected Workflows: Claude, Claude Code/Cowork, LLM APIs and AI services, MCP-connected tools, workflow automation

Infrastructure & Quality: Self-hosted email delivery (Linux, Postfix, Dovecot, OpenDKIM, Cloudflare DNS), Docker, Terraform, AWS (App Runner, ECR, RDS, S3, IAM), GitHub, Vercel, Sentry, pytest, Playwright, Vitest

EDUCATION

University at Albany, SUNY

May 2025

Bachelor of Science in Computer Science, Minor in Mathematics
